In this video we will cover:

- Binary Addition
- Calculating the Two's compliment
- Subtraction by adding the Two's compliment

Adding Binary Numbers

- Addition works like it does with decimal integers
 - Align them to the right
 - Work from right to left carrying anything not in the column you are working on.
- Remember:
 - $1 + 1 = 10$
 - $1 + 1 + 1 = 11$
 - $1 + 1 + 1 + 1 = 100$

Adding Binary Numbers

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \end{array}$$

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \quad \quad \quad 0 \end{array}$$

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \quad \quad \quad 10 \end{array}$$

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \quad \quad \quad 010 \end{array}$$

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \quad \quad \quad 1010 \end{array}$$

$$\begin{array}{r} 10101101 \\ + \quad 11101 \\ \hline \quad \quad \quad 01010 \end{array}$$

$$\begin{array}{r} 1111 \quad 1 \\ 10101101 \\ + \quad 11101 \\ \hline \quad 001010 \end{array} \quad \begin{array}{r} 1111 \quad 1 \\ 10101101 \\ + \quad 11101 \\ \hline \quad 1001010 \end{array} \quad \begin{array}{r} 1111 \quad 1 \\ 10101101 \\ + \quad 11101 \\ \hline \quad 11001010 \end{array}$$

Two's Compliment

- Negative binary numbers are stored as a two's compliment number.
- An 8 bit number can have the range
 - 0-255 unsigned
 - -128 to 127 signed
- To calculate a 2's compliment:
 - Pad with zeros on the left until length specified.
 - Subtract 1
 - Flip all bits (1 to 0 and 0 to 1)

Two's Compliment

Calculate 8 bit negative of these:

101101

1011

1

1111111

1100

1) pad it out

00101101

00001011

00000001

01111111

00001100

2) subtract 1

00101100

00001010

00000000

01111110

00001011

3) flip bits

11010011

11110101

11111111

10000001

11110100

Subtract using Two's Compliment

- Parts of a subtraction problem:
 - Minuend - Subtrahend = Difference
- 1 Calculate the Two's Compliment of the Subtrahend
 - 2 Add #1 to the Minuend
 - 3 Ignore the last carry bit.

Binary Subtraction

- Subtract 0100 from 0110 (4 bits)
 - $0110 - 0100 = \text{????}$ (should be 0010)

1 2's compliment (3 steps)

i Pad out 0100

ii Subtract 1 0011

iii Flip bits 1100

2 Add

$$\begin{array}{r} 0110 & 0110 & 0110 & 0110 & 0110 \\ \underline{1100} & \underline{1100} & \underline{1100} & \underline{1100} & \underline{1100} \\ 0 & 10 & 010 & 0010 & 0010 \end{array}$$

3 Ignore the last carry = 0010
